The business I have chosen for this project is a Private School from Kindergarten to Tenth Grade. I always dreamt of being a BusinessWoman and this would be my first step in entering the business world.

The data I store for this business is Students names,Parents names,their Date of births,Attendance,Students who paid the tuition fees and who didn't,Transportation details,Events to be held in academic year,Marksheets,Subjects they have enrolled into,Stock etc.,

I will get the data by the documents provided by students and it will be first entered manually. All the respective employees will be using this data.For example Class 1 teacher will be using the respective class data and Transportation department will be using the transportation data itself and me as an Owner of this business will be given access to all the data.
